

User Documentation:

Open the webserver (port 3000 – see build documentation on how to start the services)

Select a model (from the top bar)

Type your prompt – wait for the response.

➔ Usage is similar to chat.gpt

Hit the shutdown button to stop the model

Close the browser

In the CMD:

Run backend/main.py to input text from file prompt.txt and see the output in the generated markdown files.

Test all LLMs by running allmodels.py
