

Errors with Dockers: Not able to install Docker Desktop correctly – Windows restart error

(I think this might just be a me-problem, but it might also be a Windows10 problem. I need to look into it further, but this is the reason I was not able to run the LLM in a Docker)

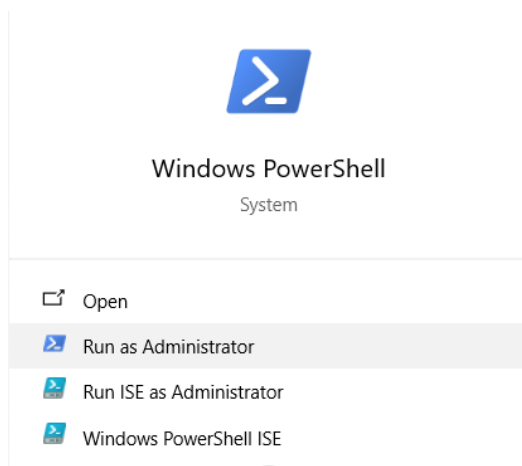

Environment: Working on a Windows-10 System

Latest Update: <https://support.microsoft.com/en-gb/topic/april-22-2025-kb5057056-cumulative-update-for-net-framework-3-5-4-8-and-4-8-1-for-windows-10-version-22h2-614c3e12-bc39-4cff-b2d4-bdd421ac86b4>

I have installed Docker Desktop and have this Error-Box:

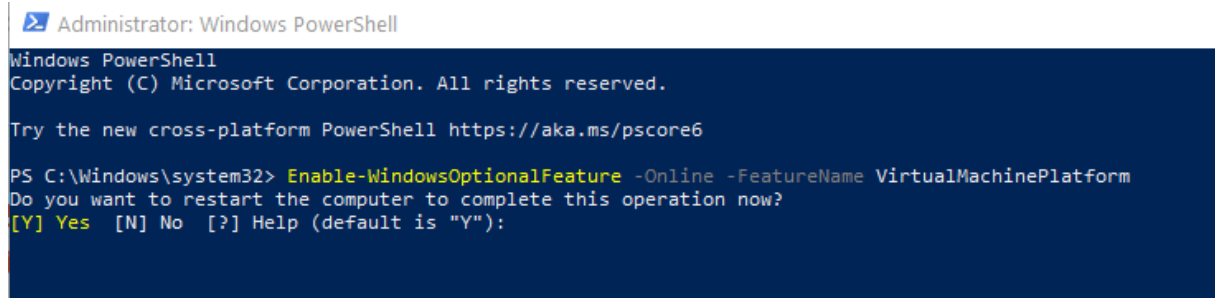

To solve this, I have opened an Windows Power-shell with administrative rights

And run this command:

`Enable-WindowsOptionalFeature -Online -FeatureName VirtualMachinePlatform`

This is the resulting interaction:

A screenshot of a Windows PowerShell terminal window. The title bar reads "Administrator: Windows PowerShell". The terminal text includes the standard Windows PowerShell header, a copyright notice for Microsoft Corporation, and a link to the new cross-platform PowerShell. The user has entered the command `Enable-WindowsOptionalFeature -Online -FeatureName VirtualMachinePlatform` in the C:\Windows\system32 directory. The terminal prompts for a restart: "Do you want to restart the computer to complete this operation now?". The user has responded with "[Y] Yes".

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Try the new cross-platform PowerShell https://aka.ms/pscore6

PS C:\Windows\system32> Enable-WindowsOptionalFeature -Online -FeatureName VirtualMachinePlatform
Do you want to restart the computer to complete this operation now?
[Y] Yes  [N] No  [?] Help (default is "Y"):
```

If I click on y, my Laptop tries to reboot and fails. It can only be restarted, after several Attempts of restarting, with the help of Safe Mode. Restarting in a better/ complete way is not possible and results in a restart loop.

Further thoughts:

I have tried reversing the last update, but no improvements can be made. I think the error occurs from the installation of either Ollama or Docker Desktop, since before that all restarts worked.

At this point I have decided to just get the LLM running without a Docker, since it currently dose not work on my system.
